## International Perspectives on Leading Low-Performing Schools

Research is clear: School leadership quality matters. However, our knowledge of effective school leadership remains limited in at least three substantial ways. First, our understanding of school leadership effectiveness generally and school principal effectiveness specifically is limited to Western contexts, primarily North America and western European ones. Second, even in the confines of Western research and context, there has been relatively little specific focus on effectively leading low-performing schools. Third, even the conceptualization of leadership—do we mean the school principal, an administrative team, or a broader school leadership team—is a key factor in how we define and respond to the challenge of leading in low-performing schools. This book advances discussion and disseminates knowledge and global perspectives on what school leadership looks like, how it is enacted and under what circumstances, and when or where lessons might be portable.

We anticipate this book having wide appeal for researchers, policymakers, and practitioners considering school leadership and how to support it effectively. The chapters suggest a noticeable level of convergence globally on how to lead low-performing schools effectively. Yet, there are clear political and culture differences that add significant gradation to how school leaders might enact best practice locally or inform policymakers and systems leaders about how to set up school leaders for success and subsequently support them. This book is one of the first that prioritizes the universality and nuance of leading low-performing schools globally.

## Enduring Myths That Inhibit School Turnaround

Coby Meyers, University of Virginia; Marlene Darwin, American Institutes for Research

2017. Paperback 9781681238876 \$45.99. Hardcover 9781681238883 \$85.99. eBook 9781681238890 \$65.

The concept of school turnaround—rapidly improving schools and increasing student achievement outcomes in a short period of time—has become politicized despite the relative newness of the idea. Unprecedented funding levels for school improvement combined with few examples of schools substantially increasing student achievement outcomes has resulted

in doubt about whether or not turnaround is achievable. Skeptics have enumerated a number of reasons to abandon school turnaround at this early juncture. This book is the first in a new series on school turnaround and reform intended to spur ongoing dialogue among and between researchers, policymakers, and practitioners on improving the lowest-performing schools and the systems in which they operate. The “turnaround challenge” remains salient regardless of what we call it. We must improve the nation’s lowest-performing schools for many moral, social, and economic reasons.

In this first book, education researchers and scholars have identified a number of myths that have inhibited our ability to successfully turn schools around. Our intention is not to suggest that if these myths are addressed school turnaround will always be achieved. Business and other literatures outside of education make it clear that turnaround is, at best, difficult work. However, for a number of reasons, we in education have developed policies and practices that are often antithetical to turnaround. Indeed, we are making already challenging work harder. The myths identified in this book suggest that we still struggle to define or understand what we mean by turnaround or how best, or even adequately, measure whether it has been achieved. Moreover, it is clear that there are a number of factors limiting how effectively we structure and support low-performing schools both systemically and locally. And we have done a rather poor job of effectively leveraging human resources to raise student achievement and improve organizational outcomes.

We anticipate this book having wide appeal for researchers, policymakers, and practitioners in consideration of how to support these schools taking into account context, root causes of low-performance, and the complex work to ensure their opportunity to be successful. Too frequently we have expected these schools to turn themselves around while failing to assist them with the vision and supports to realize meaningful, lasting organizational change. The myths identified and debunked in this book potentially illustrate a way forward.
